

## PreGISP Exam Blueprint Weights

Weight calculation for the first iteration of the pre-GIS exam blueprint. The weights are based on how often a fitting knowledge area featured in the learning outcomes of syllabi submitted by instructors of GIS&T courses in the United States. The knowledge areas are from the 14 groups that we derived from the combined bodies of knowledge of UCGIS and EO4GEO.

Given the distribution of these knowledge areas in the syllabi that indicate the most common subjects taught in US-based GIS&T courses, we then incorporated GeoComputation in the Analytical Methods category, and aggregated Physical Principles, Platforms/Sensors, and Image Processing in a knowledge area called Remote Sensing.

Concept	Percen						Prel. Weight	11 Knowledge Areas	Blueprint Weight
	Take 1	Take 2	Take 3	Sum	t	14 Knowledge Areas			
AM01	15	12	21	48	1.49%	Analytical Methods	17%	AM + GC	18%
